SUMMARY

Data Analyst and Power BI Developer with 7+ years of experience, moving from SEO and e-commerce into analytics and automation. Built 15+ production Power BI dashboards and 8 end-to-end automation pipelines across 6 industries, using star-schema modeling, DAX, Power Query, Power BI Service, SQL, and ETL/ELT. Turns business requirements into BI reports and replaces manual workflows with automation in Airflow, Python, n8n, Landbot, and HubSpot CRM.

SKILLS

BI & Visualization: Power BI (Desktop, Service), DAX, Power Query (M), Data Modeling (Star Schema), Row-Level Security (RLS), Dataflows, Tableau, Looker Studio, Qlik Sense, Excel

Databases & ETL: SQL, SQL Server, MySQL, MS Access, ETL/ELT, Data Warehousing

Programming: Python, JavaScript (Node.js, Apps Script), HTML, CSS

Data & AI: Pandas, Selenium, Playwright, BeautifulSoup, DeepSeek API, OpenAI Whisper

Automation: n8n, Apache Airflow, HubSpot, LeadFlow Pro, WhatsApp Cloud API, REST APIs & Webhooks, Zapier, Landbot

Research: SPSS, Brand24, IPSOS Synthesio

Ways of Working: Requirements Gathering, Stakeholder Management, Data Governance, Agile

EXPERIENCE

Growth Data & AI Specialist **Oct 2026 – Present**

Remote Opus

- Ran the live AI WhatsApp assistant and 16 lead automations in LeadFlow Pro (HighLevel) for a Dutch renovation company, including prompt engineering, call-booking rules, handover and complaint flows, follow-ups, and daily lead-source reports.
- Wrote a spec of every live automation and rebuilt the system in self-hosted n8n to replace the €500/month platform: AI WhatsApp assistant, lead intake (website, Meta lead ads, WhatsApp), Google Calendar booking, alerts, and follow-ups.
- Connected the WhatsApp Cloud API and Meta Graph API (webhooks, templates, delivery statuses) and built a two-way HubSpot CRM sync. The bot now pauses when the owner replies from the WhatsApp app, which LeadFlow could not do.
- Set up UTM tracking via the Google Ads URL suffix and hidden form fields, so each lead's source and keyword reach the CRM.
- Wrote automated tests (regression, real-phone, concurrency, DST, failure injection), ran a full code audit, and fixed every critical and high finding. The system is tested locally and its VPS go-live is in preparation.

Data Analyst **Apr 2023 – Jun 2026**

Press Information Department

- Gathered stakeholder requirements and built interactive, user-centric Power BI dashboards on multiple data sources to track performance metrics.
- Cleaned, shaped, and merged source data in Power Query, then designed star-schema models (fact and dimension tables, relationships, cardinality) so reports could scale.
- Wrote DAX measures and calculated columns (time intelligence, weighted averages, ratios) for KPIs, trends, and segmentation.
- Integrated Power BI with SQL Server, Access, and Excel; published to Power BI Service workspaces with scheduled refresh.
- Implemented Dataflows, RLS, and deployment pipelines, and optimized DAX and model performance on large datasets.
- Replaced the manual daily reporting process with Python ETL scripts.
- Built an end-to-end Apache Airflow pipeline that scrapes daily coverage, scores each item's sentiment with the DeepSeek API, and writes a daily media monitoring report in Word.
- Wrote Python scrapers (Selenium, Playwright, BeautifulSoup) for 29+ newspapers that save clean text as JSON/CSV for analysis.
- Developed a Tkinter + Selenium tool that runs Brand24 monitoring without manual steps: it enters keywords, sets region, language, and date filters, downloads and renames the PDF report, posts it to WhatsApp, and archives it.
- Created an urgent-case alert pipeline in Apps Script and Python: a Google Form entry creates a PDF report, emails stakeholders, and saves it to Drive, and a Python watcher (.bat, every 5 minutes) sends it to the WhatsApp response group.
- Built a bilingual (Urdu/English) WhatsApp case-reporting bot in Landbot that collects case type, location, details, and contact.
- Implemented multi-language speech-to-text transcription with OpenAI Whisper.
- Used an MCP (Model Context Protocol) server to score public sentiment in YouTube videos and their comments.
- Kept report data accurate and secure, following data governance and compliance rules.

E-Commerce Specialist (Team Lead) **Aug 2022 – Dec 2022**

Vapes Direct

- Built Power BI dashboards for sales and performance metrics that the team used to make decisions.
- Led WordPress e-commerce operations: listings, inventory, acquisition tracking, conversion optimization, and A/B testing.
- Managed the company ERP (stock levels, inventory, purchase orders) and kept stock records matched to the live store.
- Maintained the e-commerce department's SOPs and dispatch plan.

E-Commerce Officer **Apr 2020 – Jun 2022**

Izoc Solutions

- Built monthly and annual sales reports and interactive dashboards in Excel and Power BI.
- Managed PPC campaigns on Amazon, Walmart, eBay, and Etsy and optimized them for ad performance and ROI.
- Ran keyword research and listing optimization to improve product ranking, click-through rate, and conversions.
- Found profitable wholesale products through product hunting and pricing analysis.
- Handled account health, case resolution, and policy compliance on all four marketplaces.

SEO Specialist **Mar 2017 – Feb 2020**

IT Supersonics

- Did on-page SEO in HTML and CSS to improve site structure and search rankings.
- Used keyword research and competitor analysis to plan SEO strategy and content.

PROJECTS

HR Analytics: Employee Attrition Dashboard. Power BI dashboard for a 1,470-employee workforce. DAX risk multipliers show what drives attrition: overtime (3× risk), low income (5× risk), and the Sales Rep role (39.8% attrition). Drill-through goes from any job role to employee-level detail, with segmentation by department, age group, marital status, and income.

Amazon Product Analytics Dashboard. Power BI dashboard on 1,351 products with 23.8M reviews across 4 main categories. The 10K to 20K price tier brings in 28% of GMV and the 20K+ premium tier 25.7%. DAX measures compute weighted ratings (4.16 vs. a 4.09 simple average) and a GMV proxy, with drill-through to product detail.

Sales & Supply Performance Dashboard. B2B Power BI dashboard with interactive filters that combines the sales and purchasing databases. It tracks YTD revenue, perfect order rate, on-time delivery, top customers by revenue, and the 90-day demand-supply gap, which flagged a 5,821-unit shortfall across SKUs.

Esports Career Performance Analytics (Tekken 8). Power BI dashboard on 273 matches from 32 tournaments worldwide, covering opponent matchups, character-pick performance, progress per tournament, and win streaks calculated in DAX.

Fatwa Archive Scraper. Python scrapers (BeautifulSoup, Playwright) for multi-language fatwa archives, one per site to handle its own structure and language. Together they produced about 300K clean JSON/CSV rows.

Pulmonary TB Knowledge-Attitudes-Practices (KAP) Study. Pro bono SPSS analysis of a 250-respondent survey for a medical student's thesis on care-seeking delays and TB awareness: frequency distributions and cross-tabs by gender, age, education, and residence.

EDUCATION

Bachelor in Computer Sciences **Feb 2014 – Feb 2018**

The University of Lahore
