Data Analyst & Automation Specialist

Islamabad, Pakistan | [m h2713@yahoo.com](mailto:h2713@yahoo.com) | [linkedin.com/in/mhamzzaa](https://www.linkedin.com/in/mhamzzaa)

SUMMARY

Data Analyst with 7+ years progressing from SEO and e-commerce operations into full-time data infrastructure — building production-grade Python pipelines, automated reporting systems, and multi-source Power BI dashboards. Currently at Pakistan's Press Information Department, where I automated daily media monitoring with the DeepSeek API, scraped ~3 lakh rows across newspaper and fatwa archives, and replaced manual reporting workflows with reliable, hands-off systems on Selenium, Playwright, and Apps Script.

SKILLS

BI & Visualization: Power BI, Tableau, Looker Studio, Qlik Sense, Excel

Programming: Python, SQL, HTML, CSS, Bootstrap

Data & Scraping: Selenium, Playwright, BeautifulSoup, Pandas, DeepSeek API, OpenAI Whisper

Automation: Apps Script, Tkinter, N8N, Zapier, Landbot

Databases: MySQL, MS SQL Server

Research Tools: SPSS (basic)

Monitoring Tools: IPSOS Synthesio, Brand24

E-Commerce: Helium 10, Keepa, Jungle Scout, E-Rank, Marmalead, Mailchimp

EXPERIENCE

Data Analyst

Apr 2023 – Present

Press Information Department

- Designed and developed interactive dashboards in Power BI using multiple datasets to visualize performance metrics and surface actionable insights.
- Integrated Power BI with Microsoft Access, Excel, and SQL Server to establish seamless data connections and reporting pipelines.
- Automated the complete daily reporting process in Python, significantly reducing manual workload and improving operational efficiency.
- Built an end-to-end automation that scrapes daily coverage, runs each item through the DeepSeek API for sentiment analysis, and generates a daily media monitoring report in Word format.
- Developed multiple Python scrapers (Selenium, Playwright, BeautifulSoup) to extract data from 29+ newspapers — collected clean text into JSON/CSV ready for analysis.
- Built a Tkinter + Selenium tool that automates Brand24 monitoring end-to-end — pastes keywords, applies region/language/date filters, downloads the PDF report, renames it, posts it to the relevant WhatsApp group, and archives the file to prevent duplication.
- Created an urgent-case alert pipeline using Google Apps Script and Python — triggered by a Google Form, it generates a full PDF report, emails stakeholders, drops the file in Drive, and a Python watcher (scheduled via .bat every 5 minutes) ships it to the WhatsApp response group.
- Implemented a multi-language speech-to-text transcription system using OpenAI Whisper.
- Applied data extraction and analytical techniques to identify, analyze, and interpret significant trends across diverse data sets.
- Ensured adherence to data security and compliance standards across all analysis and reporting tasks.

E-Commerce Specialist (Team Lead)

Aug 2022 – Dec 2022

Vapes Direct

- Led WordPress e-commerce operations — product listings, inventory management, acquisition tracking, conversion optimization, and A/B testing.
- Built Power BI dashboards for sales and performance metrics, driving data-informed decisions across the team.
- Maintained Standard Operating Procedures (SOPs) and dispatching plan for the e-commerce department.

E-Commerce Officer

Apr 2020 – Jun 2022

Izoc Solutions

- Managed PPC campaigns across Amazon, Walmart, eBay, and Etsy — optimizing ad performance and ROI across four major marketplaces.
- Conducted keyword research and listing optimization to improve product ranking, click-through rates, and conversions.
- Performed product hunting (wholesale model) and pricing analysis to identify profitable, sustainable products with competitive positioning.
- Built monthly and annual sales reports and interactive dashboards in Excel and Power BI.
- Managed account health, case resolution, and platform policy compliance across all marketplaces.

SEO Specialist

Mar 2017 – Feb 2020

IT Supersonics

- On-page SEO optimization (HTML, CSS) to improve website rankings, structure, and search visibility.
- Keyword research and competitor analysis to guide SEO strategy and content optimization.

EDUCATION

Bachelor in Computer Sciences — The University of Lahore

Feb 2014 – Feb 2018

PROJECTS

Pulmonary TB Knowledge-Attitudes-Practices (KAP) Study — Quantitative Analysis. Analyzed a 250-respondent survey for a final-year medical student's research on pulmonary tuberculosis. Used SPSS for frequency distributions, demographic cross-tabs (gender, age, education, residence), and visualizations to support thesis findings on care-seeking delays and TB awareness gaps.

Sales & Supply Performance Dashboard. Power BI dashboard integrating Sales and Purchasing databases — tracks YTD revenue, perfect order rate, on-time delivery, top customers by revenue, and 90-day demand-supply gap by item, with interactive filters for sales rep, customer type, and date range.

Fatwa Archive Scraper. Built site-specific Python scrapers across multi-language fatwa archives — each handled the site's own structure and language quirks, producing ~3 lakh clean JSON/CSV rows ready for analysis. (Python, BeautifulSoup, Playwright)

HR Analytics — Employee Attrition Dashboard. Power BI dashboard across a 1,470-employee workforce — uses insight-driven chart titles and DAX-calculated risk multipliers to surface attrition drivers (Sales Reps lead at 39.8%, OverTime 3x risk, low income 5x risk, poor work-life balance 2x risk, low job satisfaction 2x risk). Includes drill-through from Sales Representative to employee-level detail, multi-dimensional segmentation (department, age group, marital status, work-life balance, income group), and interactive filters across OverTime, education field, job role, and department.

Amazon Product Analytics Dashboard. Power BI dashboard analyzing 1,351 products with 23.8M total reviews — headline KPIs surface GMV proxy (₹6,896 Cr), weighted rating (4.16), and average discount (46.69%). Segments performance by price tier (10–20K range drives 28% of GMV) and identifies the discount sweet spot (3,807 products concentrated in the 21–40% band). Includes a Rating vs Reviews scatter for top-product positioning, category-level revenue contribution, and review-volume distribution, with multi-dimensional filters across category, sub-category, rating range, discount range, and price range. Built with DAX measures for weighted ratings and GMV proxy calculations.

Arslan Ash — Tekken 8 Career Performance Dashboard. Two-page Power BI dashboard tracking 220 matches across 26 tournaments and 2 seasons. Career Analytics page surfaces overall win rate (79.1%), win-rate trajectory by tournament, performance vs top 5 opponents, opponent-country breakdown, and net advantage by character matchup with drill-through to Head-to-Head detail. Tournament Overview page tracks tournament record (174-46), tournament win rate (26.92%), season-over-season improvement (+4.7%), and finish distribution (7 outright wins across 26 events). Built with DAX measures for relative performance and momentum metrics.
